ADVANTAGE

PROGRAM PORTFOLIO

SAKATA®

Continuing to grow the Radish program!

Our radish program offers an array of choices of cello, bunch, slicing and multi use varieties. All are bred with the grower in mind and offer excellent yields and high-quality. When it comes to radishes, Sakata delivers reliable performance and market versatility. That's the Sakata advantage!

Cello / Bunch / Slicing

Crunchy Delight

Crunchy Delight is a summer type radish that displays very nice uniformity and internal qualities. It is tolerant to cracking and pithing. Medium-height erect tops connect to consistently round bulb shaped fruit with a glossy scarlet red exterior and brilliant white interior. Crunchy Delight displays excellent yield potential, especially in Northern growing areas.

Cello / Bunch / Multi

Regal Red

Regal Red is a fast-maturing summer radish variety that produces uniform, round bulbs. It is a consistent performer in many regions of summer radish growing areas, as well as spring/fall seasons of winter radish growing areas, and has a medium-short top.

Bunch / Cello

Crunchy Royale

Crunchy Royale is a dark red, round radish ideal for bunching or cello pack. It yields high quality and extremely uniform roots. Overall, Crunchy Royale offers excellent internal and external color and a high pack-out rate for growers.

Cello / Bunch

Crunchy King

This variety has excellent shape and uniformity. It has bright white interior with attractive dark red skin and is mid-early maturing. Crunchy King holds its round shape and does well all season, but it is strongest in fall and spring slots. It has very high recovery and is slow to pith.

Bunch / Cello

Cherriette

Cherriette is a warm season radish used in the fall and spring in most areas. It has a bright red color and short tops. This variety is uniform and slow to develop pith. Cherriette performs well under warmer conditions and yields better than O.P.s in its class.

Cello / Bunch / Multi

Crunchy Crimson

This outstanding variety yields roots with superior quality and uniformity. These roots have bright red skin with excellent interior quality and are very slow to develop pith. Crunchy Crimson grows well under cool conditions.

Bunch

Easter Egg II

Developed for the home garden and novelty bunching trade, Easter Egg II offers a range of six colors. These radishes are round, large and late to become pithy. Sliced into a garden salad or included in a vegetable tray, Easter Egg II is certain to add distinctive colors and flavor.

Home Garden

French Breakfast

French Breakfast features a cylindrical root, two to three inches in length. The root is 2/3 scarlet with a white tip. The mild flavor and early/mid maturity make this a favorite in its class.

Bunch / Cello

Fireball

Fireball offers excellent dark red roots with uniform tops. Yield potential is much greater with Fireball because of its hybrid uniformity.

RADISH AT-A-GLANCE

Variety	Days to Maturity from Direct Seed*	Top Length	Root Characteristics	Uses & Remarks
French Breakfast ^{OP}	22-23	Medium	Oblong, scarlet with white tip	Excellent for home garden. Delicate flavor.
Cherriette	23	3"	Globe, cherry red	Short top type for bunch or cello. Grows well in warm regions. Very uniform size and shape.
Crunchy King	24	Medium	Round, scarlet red	Crunchy King holds its round shape and does well all season, but it is strongest in fall and spring slots.
Regal Red	24	Medium short	Round, scarlet red, uniform	It is a consistent performer in many regions of summer radish growing areas, as well as spring/fall seasons of winter radish growing areas, and has a medium-short top.
Crunchy Red	25	Medium-tall	Round to globe, scarlet red, medium-large	Can get large sized roots without pith in cool weather. Excellent for bunching.
Crunchy Royale	25	Medium-tall	Round, dark red	Excellent uniformity with nice exterior color. Grows well under cool conditions. Bunch or cello type with high pack-out.
Fireball	25	Medium-tall	Round, dark red	Performs well in warm weather. Hybrid uniformity.
Winner	26-28	Medium-tall	Round, dark red	Strong, tall tops, best for bunching. Performs well under short days and cool weather. Superior field uniformity.
Crunchy Crimson	27-28	Medium-tall	Round, dark red, medium-large	Vigorous top under cool condition. High yields with good uniformity.
Crunchy Delight	28	Medium	Round, scarlet red, large	Crunchy Delight displays excellent yield potential, especially in Northern growing areas.
Champion ^{OP}	28	Medium	Globe, bright red	Late to get pithy. Strong tops for upland soils. Performs well for bunching and shipping.
Easter Egg II ^{OP}	28	Tall	Round, shades of red, purple and white	Delightful colors and delicate flavor. Offers six shades of red, purple and white. Home garden and specialty bunch.
Gloriette	28	Medium	Globe-shaped, bright red, large	Roots have an excellent taste and display a very good shelf life once harvested.
Shunkyo Semi-Long	30-35	4-5"	Cylindrical, tapered, pink	The slow-bolting, pink-stemmed tops are also edible and can be grown for baby greens mixes. Can be sown throughout the year.
Stargazer ^{OP}	55-60	Medium-tall	Elongated tapered, rosy pink	Upright bright green tops with strong attachment. Can be used as a delicious addition to salads, or for slaw or pickling.
Starburst	60	Upright	Flat round, white/green, large	Mature roots are tangerine sized with upright bright green foliage. Use to dress up salads or slaws or pickle them to preserve.

^{OP} = Open Pollinated. * Days to Maturity are an approximation and may fluctuate due to varying planting times, location and conditions.

DISCLAIMER: Any representations and other disclosed information are based on our observations and/or information from other sources. Crop performance depends on the interaction between the genetic potential of the seed, its physiological characteristics, the environment, including management, and other uncontrollable factors that may alter expected performance. Triploid hybrid watermelon varieties will on occasion produce white and hard, dark vestigial seed coats and, therefore, are not warranted to be completely "seedless". Statements on the reaction of varieties to a specific pathogen, pest or stress are based on evaluation under defined conditions. These reactions can be affected by changes in environmental and biological factors, especially new pathogen races, pest biotypes or vectors of disease agents. Therefore, Sakata gives no warranty, express or implied, for crop performance relative to the information given; nor does Sakata accept any liability for any loss, direct, indirect, or consequential, that may arise from any cause. Please read all seed package labeling carefully as it contains terms and conditions of sale.
